

Asset Maintenance & Defect Reporting

Asset Maintenance

With a range of assets including company vehicles, trailers, fork lift trucks or anything that requires planned and recorded periodic maintenance or inspection, Asset Maintenance provides a full audit trail and complete digital storage of documents for peace of mind.

Designed to schedule and plan maintenance events from any web-enabled device, the online portal provides easy access from any location, whatever your fleet size.

Integration

Integration with our other software solutions allows the user to drill into linked information so that defects and PMIs for example can be assigned to mechanics with a simple click of a button.

Similarly, the accessibility of tachograph data allows for a fully rounded compliance picture when it comes to vehicles being listed as 'Vehicle Off Road'.

PMI's

PMI's can be quickly uploaded from emails into the software, then selected electronically and signed for digitally. Other off-platform documents can be efficiently scanned into the software and managed in the same way.

Benefits

- Monitoring of vehicle costs
- Sign for PMIs digitally
- User-friendly interface
- Integration with Daily Driver Defect App
- Maintenance scheduling
- Event alerts
- Online access
- Real-time updates
- One central location

Daily Driver Defect Reporting

The Aquarius App for daily driver defect reporting provides an efficient alternative to paper checks removing paper and storage issues.

Digital checks ensure the reporting of vehicle defect data can be done in real time whilst saving time and money.

The flexibility of the solution means that you can choose from a selection of pre-set templates or build bespoke templates depending on fleet and vehicle types and requirements.

Features:

- PIN specific secure access
- User-friendly
- Load photos and add notes
- Perform emergency defect checks
- Accident Recording function
- Security Checks
- Infringement sign off

Reporting

The user location and the time taken for the check to be performed are just two of the standard recordings made in order to give managers an awareness of the check efficiency and validity ensuring a streamlined process for any follow up procedures and a full audit trail. In turn, integration of this data with Asset Maintenance allows for a streamlined process and full audit trail.

Let the Aquarius IT system help you to take control of the maintenance and management of your company assets
